To set up services through KPPFree™, or get answers to your questions, call us today.

### October is Breast Cancer Awareness Month!

October is designated as Breast Cancer Awareness Month across the world with the goal of increasing awareness and promoting early detection and treatment.

As the most common type of cancer in women worldwide, there are approximately 1.4 million new cases annually. More than 1 in 8 women in the United States will develop breast cancer in her lifetime. Although rare, men can also develop breast cancer.

Early detection is the key to successful outcomes. According to the American Cancer Society, when breast cancer is detected early, and is in the localized stage, the 5-year relative survival rate is 99%.

Being familiar with the symptoms of breast cancer is important, however, many breast cancer symptoms are not noticeable without a professional screening. KPPFree™ is available for your breast health services from screening mammograms to breast procedures and oncology.

## EASY AS 1-2-FREE!
